My Lenovo L-196W widescreen 19.5-inch monitor has a CMI 8741 chip. from the manufacturer. The monitor uses a standard Digital DisplayPort (DP) cable. It is quite simply a Dell Ultrasharp 24c (1920x1200) with a CML 5K24 16:9 LCD panel. The monitor is mostly used at home, and is set to 1920x1200. From my many searches, I have found tons of articles and reviews about the monitor. It has great picture, excellent colors, and it seems to be a fairly rare model. The monitor came with a driver disc. I installed the recommended driver. It changed the size of some of the icons on the desktop from small to medium. It has a resolution of 1920x1200. I used to have a pretty good digital camera. The picture that came from it was barely acceptable. When I switched the size of the icons to

medium, the picture improved. Lenovo Monitor Driver Problem Lenovo Lm418w wide hd monitor problems driver Info, Reviews. The Lenovo Lm418w high-def monitor (or laptop monitor) might not be the most lightweight when it comes to portability, but. This upgrade is complete with the new Lenovo Lm418w driver, and provides easier. Problem: Lenovo Lm418w Monitor may not work in dual monitor mode?.
