implement this through a DataSource. My code in VB.NET if that makes any difference. Question How can I properly develop this DataSource into a valid ServiceReference in WCF? Problem The following code is not working and results in a System.InvalidOperationException being thrown:

```
Dim datasource As New
    BLL.Data.MyDataSourceClass
    InnerException.ToString() =
        "System.MissingMethodException: No
parameterless constructor defined for this object."
Code Imports System.Collections.Generic Imports
    System.Linq Imports System.Runtime.Remoting
Imports System.Text.RegularExpressions Imports
    BLL.Data Imports System.Web.Services Imports
        System.Data.SqlClient Imports
            System.Data.SqlTypes Imports System.Data
                Imports System.Xml Imports
                    Microsoft.ReportingServices.Data Imports
                        System.Data.Common Imports
                            System.Data.SqlClient Public Class
                                MyDataSourceClass Inherits DataSource '
'Summary ' 'ConnectionString 'String 'String Public
Sub New(ByVal connectionString As String, ByVal
    user As String, ByVal pwd As
```
